Farm employment and wage rates	126-128

ACREAGE AND PRODUCTION OF CROPS IN 1955

Crop production in 1955 almost equalled the 1948 record and considerably surpassed the total for any of the past 6 years. Production was generally good, crop by crop and area by area, with some notable exceptions. The combined acreage of principal crops harvested was smallest since 1940 but generally high yields per acre more than offset acreage reductions.

Index comparisons furnish a quick summary view of results of farmers' 1955 production efforts. The index of 1955 total production of all crops reached 105.4, only slightly below the 1948 peak of 106, and exceeded 1954 at 101 and 1953 at 103. The index of overall yield, at 117 percent of the 1947-49 base, is record high by a wide margin.

Several Production and Yield Records Set

New high crop production totals were attained for oats, soybeans, hay, alfalfa seed, sorghum silage, and oranges. Second largest crops of record were produced for barley, sorghum grain, and rice. Many other crops had above average out-turn, including corn, flaxseed, sorghum forage, cotton and cottonseed, sugar beets, dry beans, rye, sweet clover seed, lespedeza seed, broomcorn, grapes, cherries, apricots, avocados, lemons, cranberries, and walnuts. Wheat, both winter and spring, fell nearly a fifth below average. Other crops much below average were dry peas, cowpeas, sweetpotatoes, buckwheat, sugarcane sirup, peaches, pecans, and tung nuts.

New record yield averages were attained by oats, spring wheat, rice, cotton, hay, tobacco, sugarcane for sugar, sugarcane for sirup, sorgo sirup, sugar beets, potatoes, sweetpotatoes, and velvetbeans. Winter wheat matched the former record set in 1952 after heavy acreage loss in areas which have below average yields. Peanut yields were second high. Corn yields ranked third of record even after severe late summer damage in Western Corn Belt areas.

Weather Varied by Areas

Weather favored crop progress and outcome in many ways during 1955. This favorable weather came without much fanfare. Sharp weather setbacks also came which were spectacular and much publicized. Rains early in the season brought adequate soil moisture to many important producing areas where drought had persisted in 1954. Open weather which followed permitted timely seeding of small grains and planting of cotton, corn, and soybeans. Heavy May rainfall over a vast central area aided early crop growth and enabled farmers to plant or replant large acreages to cotton, sorghum, and other crops. Cool June and early July weather permitted unhurried maturity of most small grains which attained high test weight and quality. Higher temperatures in critical periods also helped wheat mature ahead of damage from rust, which struck hard in 1954. Cotton, tobacco, and rice all had favorable planting, growing, and harvesting weather. Harvest weather for corn, soybeans, and most other late crops was generally satisfactory.

But the season also brought damaging reverses. In late March, hard freezes killed almost all of the early southern peach crop, many pecans, most tung nuts, and some early vegetables, and cut down some early winter grains, potatoes, alfalfa, and lespedeza hay. Drought and wind erosion killed or heavily damaged millions of acres of winter wheat in the southern Great Plains, akin to "dust bowl days." Later in the season, hurricane winds and torrential rains caused heavy property and crop loss in coastal areas in Middle Atlantic and South Atlantic States, making headline news of those notorious hurricanes Connie and Diane. The long stretch of burning heat and drought in July and August beat down on the western limits of the Corn Belt and southward and cut corn and sorghum grain yields. Summer drought was also severe in parts of Middle Atlantic States. Pacific Coast States had a cool slow season with some early freeze loss to some California deciduous fruits. In mid-November, a sharp early freeze in the Pacific Northwest caught some apples unharvested, froze some other late crops, and damaged berry plantings and ornamentals.

Improved Cultural Practices Continued

In view of the considerable weather reverses which reduced crop outturns in different sections in 1955, it appears that factors other than extremely good weather must have been in operation to produce unusually high yields. These include improvements in crop varieties, increased fertilizer use, expansion of irrigated acreage, and advances in control of plant insects and diseases. Modern power equipment also further increased farmers' remarkable capacity to get work done when it counts most. Altogether, the year's large production outcome gives new evidence of farmers' productive skill and resourcefulness.

Feed and Food Grain Production Relatively Large

Tonnage of 8 food and feed grains harvested in 1955 totaled 162 million tons, 3 percent more than in 1954 and 5 percent above the 10-year average. Food grain production at slightly below 32 million tons was smallest since 1943.

Feed grain tonnage in 1955 was outstandingly large. The 130 million ton production ranked second only to 1948 of record corn crop fame, and exceeded 1954 by 6 percent and the 10-year average by 11 percent. Corn, giant of the feed grains, lost many millions of bushels to punishing July and August heat and drought in the western Corn Belt. The 3,185 million bushel crop ranks sixth in size among the Nation's corn crops. Nearly three-fourths of the States raised more corn than in 1954 and most Southern areas had outstanding crops. Oats was a record with large acreage and such outstanding yields in many North Central areas that some reporters called it "the oats crop of a generation."

Total Acreage Dropped Below 1954

The 1955 harvested acreage total for 59 crops of 333 million acres is 5.4 million acres less than in 1954 and the smallest in 15 years. The 355 million acres of crops planted or grown in 1955 was only a half million acres less than in 1954 and 3.4 million acres or about one percent below average.

The acreage abandoned after planting, or diverted, for 15 of the principal field crops in 1955--not counting small grain acreage cut for hay--totaled 22.1 million acres. This is the largest for any year except the total of 26.1 million acres of 1951 when winter wheat loss was a record. Abandonment and diversion of winter wheat for uses other than grain, at 10.7 million acres, was again the largest element in this sizable gap between acres planted and harvested. A considerable acreage of winter wheat was later planted to sorghum and other late crops.

Record Hay and Oilseed Crops

Hay and forage growth started slowly in the spring due to March freeze damage and generally cool weather

but responded well to increased moisture and good growing weather. Record average yields per acre in which increases in alfalfa and alfalfa mixtures were prominent brought along a new record crop of 109.7 million tons. More grain hay was cut than usual but less clover-timothy, wild hay and lespedeza. Large quantities of sorghum forage also were available along with silage from corn, sorghum, and hay crops. The total forage supply, although near record high, would be needed for the large livestock population should the winter be unusually long or severe.

Oil seed crops in 1955 reached a new overall total of 19.1 million tons--a third above average and 9 percent larger than the 1954 previous record. The largest soybean crop ever grown--371 million bushels--furnished a major part of the record total.

Other Crops Vary Considerably

With acreage restrictions in effect for most types, the total tobacco acreage was the smallest since 1943, but production was the third largest of record. Flue-cured tobacco made extraordinary yields and a crop 14 percent larger than in 1954. Fire-cured types showed a 3 percent increase. Maryland, where fields were heavily damaged by mid-August wind and rain, and the Connecticut Valley, with loss from flood and drowning, had lower production than 1954.

Sugar crops had a good year in 1955 with large total outturn of both sugarcane and sugar beets from record yields on acreage which was reduced considerably below 1954. The New England maple season was of about average length and less maple products were produced than in the long 1954 season.

Potato acreage in 1955 was more than a fourth below average. However, the National average yield of 271.3 bushels far exceeded the 1950 previous record despite spring freezes in Southeastern States and drought and heat losses in Central States. The total crop of 381.6 million bushels--7 percent more than in 1954--excludes some unharvested potatoes frozen in mid-November in Idaho, Washington, and Oregon.

Dry bean production although slightly below 1954, was well above average from an acreage that was slightly below average. The season was disappointing in the Northeast and Southwest areas, but good to favorable in most of the Northwest, especially in Idaho. Dry peas had a bad year in principal producing States, with relatively low yields and higher than usual abandonment.

Six principal hay seed crops--alfalfa, red-clover, alsike-clover, sweet clover, lespedeza, and timothy--produced a total of 565 million pounds of clean seed, 45 percent larger than in 1954 and 20 percent above average. With the carryover of 101.5 million pounds from the previous season, the total supply was 666.5 million pounds, 29 percent larger than in 1954 and 18 percent above average.

Fruit Production Above 1954

The 1955 season was favorable for aggregate fruit production despite the late March freezes which drastically curtailed peach production in the Southern States and adverse conditions in California which curtailed production of prunes, figs, and olives. The aggregate production of non-citrus fruits was 4 percent larger than in 1954 but was 2.6 percent below average. Production of apples and pears was slightly under average. The rapidly expanding avocado crop was considerably above average but was much smaller than the record high tonnage of the previous season. Total production of tree nuts (almonds, filberts, pecans, and walnuts) was 3 percent less than in 1954 and 12 percent below average. Spring freezes damaged almonds and pecans, reducing production to below-average levels. Production of pecans was nearly a third below average. Only walnuts were above average in production.

The supply of citrus fruits for the 1955-56 season was again large, exceeding the production record set the previous season by 2 percent and the 10-year average by 5 percent. Aggregate citrus tonnage was almost as large as the tonnage of non-citrus fruits, largely as the result of the continued increase in orange production.

Vegetable Crops Up From 1954

The 11 principal vegetables for commercial processing produced a total of 6.14 million tons, 4 percent more than the 1954 total which was about average. The increase came from the continued upward trend in yields; the acreage harvested was smallest since 1950.

Vegetable supplies for fresh market were record large in 1955 with 10.3 million tons of the 28 principal kinds produced. This was 6 percent more than the 1949-53 average although only slightly more than the 1954 previous record. Losses from freezing temperatures in Southern States early in the spring were offset by favorable late spring weather in these and other States.

Harvested Acreage of Crops, United States, 1939–55

[1] Acreage partially duplicated.

[2] Asparagus, lima beans, snap beans, beets, cabbage (sauerkraut), sweet corn, cucumbers, green peas, pimientos, spinach, and tomatoes.

[3] Principal vegetables grown for fresh market in major producing States included in regular monthly reports. Artichokes, asparagus, lima beans, snap beans, beets, broccoli, brussels sprouts (since 1949), cabbage, cantaloups, carrots, cauliflower, celery, sweet corn (all major States included only since 1949), cucumbers, eggplant, escarole, garlic, Honey Ball Melons, Honey Dew Melons, kale, lettuce, onions, green peas, green peppers, shallots, spinach, tomatoes, and watermelons. Excludes farm gardens. Acreage for harvest, including mature acreage abandoned or only partially harvested because of low prices or other economic factors.

[4] Totals are for crops shown in preceding columns, omitting alfalfa seed, red clover seed, alsike clover seed, and lespedeza seed. These are included in the count of crops, but the acreage is not included because mostly duplicated in the hay acreage; the acreage of peanut hay, largely duplicated in peanuts picked and threshed, has been deducted. Other crops not included are hops, spelt, hemp, velvetbeans, various legumes and other crops harvested by livestock, minor crops, and fruits and nuts. The acreages shown include some crops harvested in succession from the same land.

[5] Preceding column plus estimates of acreage planted, and not harvested, as shown in separate table of acreage losses.

Bearing Acreage of Fruits, United States, 1939–55

[1] Oranges, grapefruit, and lemons. [2] Commercial apples, peaches, pears, grapes, plums, prunes, and apricots. [3] Percentage yields of the 18 field crops shown combined in proportion to their relative value during the period. [4] A composite of yields per acre of 3 citrus fruits and 7 deciduous fruits. [5] As computed from yields of field crops per acre harvested and yields of fruit per acre of bearing age, as shown, combined in proportion to their relative values during the 1947-49 period.

Harvested Acreage of Principal Crops, by States, 1954 and 1955, With Comparisons

California	6,792	7,458	7,184
United States	344,471	338,704	333,329

[1] Includes corn, wheat, oats, barley, rye, buckwheat, flaxseed, rice, sorghum grain, sorghum forage and silage, cotton, all hay, timothy seed, sweetclover seed, dry edible beans, dry field peas, soybeans for beans, cowpeas for peas, peanuts picked and threshed, sorgo for sirup, sugarcane, sugar beets, potatoes, sweetpotatoes, tobacco, broomcorn, artichokes, asparagus, lima beans, snapbeans, beets, broccoli, brussels sprouts (since 1949), cabbage, cantaloups, carrots, cauliflower, celery, sweet corn (all major States included only since 1949), cucumbers, eggplant, escarole, garlic, Honey Ball melons, Honey Dew melons, kale, lettuce, onions, green peas, green peppers, pimentos, shallots, spinach, tomatoes, and watermelons. Red clover seed, alsike clover seed, lespedeza seed, and alfalfa seed are included in the count of crops, but the acreage is not included because it is mostly duplicated in the hay acreage.

[1] Clean seed. Includes alfalfa, red clover, alsike clover, sweetclover, lespedeza, and timothy seed. [2] Produced from bloom of year shown. [3] Marketed largely during summer and early fall months of year following bloom. [4] Marketed largely during fall, winter and spring months, beginning in year shown. Includes tangerines. [5] Includes plums, prunes (fresh basis), apricots, figs, olives, and avocados. [6] Asparagus, lima beans, snap beans, beets, cabbage (sauerkraut), sweet corn, cucumbers, green peas, pimientos, spinach, and tomatoes. [7] Principal vegetables grown for fresh market in major producing States included in regular monthly reports. Artichokes, asparagus, lima beans, snap beans, beets, broccoli, brussels sprouts (since 1949), cabbage, cantaloups, carrots, cauliflower, celery, sweet corn (all major States included only since 1949), cucumbers, eggplant, escarole, garlic, Honey Ball melons, Honey Dew melons, kale, lettuce, onions, green peas, green peppers, shallots, spinach, tomatoes, and watermelons, Excludes farm gardens. Includes some quantities not marketed.

Corn Utilization, 1954 and 1955

[1] All corn, oats, barley and sorghum grain. [2] All hay, sorghum forage, and sorghum silage. [3] All wheat, rye, buckwheat, and rice. [4] Irish potatoes, sweetpotatoes, dry edible beans, dry field peas, vegetables for processing, vegetables for fresh market, and farm gardens. [5] Fruits, berries, and tree nuts. [6] Sugar beets, sugarcane for sugar and seed, sugarcane sirup, sorgo sirup, maple sugar and maple sirup. [7] Cotton lint and cottonseed. [8] Soybeans, peanuts picked and threshed, flaxseed, tung nuts, and peanuts hogged. [9] Includes production of hay, pasture, and cover crop seeds, and miscellaneous crops (cowpeas, hops, broomcorn, popcorn, peppermint and spearmint), not included in separate crop groups shown.

Acreage Losses: Estimated Acreages of Crops Planted and Not Harvested, United States, 1939–55[1]

Year	Corn	Winter wheat	All spring wheat	Oats	Barley	Sorghums	Flaxseed	Cotton	Beans, dry edible	Other crops[2]	Total[3]

[1] The acreages shown for winter wheat represent the acres sown in the preceding fall and not harvested, thus including considerable land subsequently planted to other crops. The totals do not show total crop losses chiefly because of the large acreage of hay land which produced nothing except pasturage in some dry seasons.

[2] Rice, buckwheat, potatoes, sweetpotatoes, sugar beets, and dry field peas.

[3] Excludes grains cut for hay.

Statistics of Important Crops, by States, 1955

[1] This table covers corn for all purposes, including hogged and siloed corn, and that cut and fed without removing the ears, as well as that husked and snapped for grain. The yield for grain, with an allowance for varying yields of corn for other purposes, is applied to the total acreage to obtain an equivalent production expressed in terms of grain.

[1] On acres in cultivation July 1 less 1945-54 average abandonment from natural causes.
[2] Production ginned and to be ginned. A 500-lb. bale contains about 480 net pounds of lint.
[3] Sums of acreage and production for "other States" rounded to thousands for inclusion in United States totals. Estimates for these States, except Kansas where cotton production is insignificant, are shown separately in May, July and December.
[4] Included in State and United States totals.
[5] Based on 1950-54 average ratio of lint to cottonseed.
[6] Short-time average.

1954[3]	6.9	14.3	20.3	17.1	11.7	8.9	3.6	1.5	1.5	----	----	----	[4] 85.8

[1] A small percentage for July is included in August. Loan cotton redeemed before Aug. 1 is credited to the sales within the month in which redemptions were made.
[2] Excludes unredeemed loans at the end of the crop year.
[3] Preliminary.
[4] Total through April for 1954 crop. Excludes unredeemed loans and cotton still in producers' hands on May 1, 1955.

A mimeographed report on percentage of marketings, by States, may be had from the Agricultural Marketing Service, Washington 25, D. C.

Wheat Production by Classes, United States

[1] Early and late crops shown separately for California; combined for all other States.
[2] Includes acreage planted in preceding fall.
[3] 1954 "fall" crop and 1955 "all" crop derived.
[4] Average 1949-53.
[5] Production includes the following quantities not harvested or not marketed because of low prices (1,000 bushels): Idaho 140; Washington 823 (late summer 574; fall 249); Oregon 670; North Carolina 225; Virginia 112; Kentucky 30; Kansas 6; Texas 358.

[1] Season begins with the bloom of the year shown and ends with the completion of harvest the following year. In California, picking usually extends from about Oct. 1 to Dec. 31 of the following year. In other States the season begins about Oct. 1 and ends in early summer, except for Florida limes, harvest of which usually starts about April 1. Estimates of production include fruit consumed on farms, sold locally, and used for manufacturing purposes, as well as that shipped. Fruit ripened on the trees but destroyed by freezing or storms prior to picking is not included. For economic abandonment, see page 37.

[2] Includes small quantities of tangerines.

[3] Short-time average.

[4] Net content of box varies. In Calif. and Arizona the approximate average for oranges is 77 lb. and grapefruit 65 lb. in the Desert Valleys; 68 lb. for California grapefruit in other areas; in Florida and other States, oranges, including tangerines, 90 lb. and grapefruit 80 lb.; California lemons, 79 lb.; Florida limes, 80 lb.

[5] In California and Arizona, Navels and Miscellaneous.

[6] First report of production from 1955 bloom for California Valencia oranges and grapefruit in "Other" areas is issued in December; first report for California lemons is issued in November.

4 States	5,900	5,305	3,830	5,300

[1] In some years, in addition to the quantities shown, some tonnage was not harvested on account of economic conditions.
[2] The drying ratio in Washington and Oregon ranges from 3 to 4 pounds of fresh fruit to 1 pound dried; in California, the drying ratio is approximately 2½ pounds fresh to 1 pound dried.
[3] Excludes quantities used on farms where grown.
[4] Includes some prunes canned and otherwise processed.
[5] Includes some prunes frozen and otherwise processed.
[6] Includes some other processed.
[7] Dry basis.

[1] Corn for grain; either shelled or ear corn. [2] Old crop only. [3] Less than 500 bushels. [4] Includes stocks at interior mills, elevators, and warehouses; commercial stocks reported by Grain Division, A.M.S., at terminals; and those owned by Commodity Credit Corporation which are in transit to ports, in bins and other storages under C.C.C. control. [5] Unallocated--to avoid disclosing individual operations.

Wheat Stocks

[1] Old crop only.
[2] Less than 500 bushels.
[3] Includes stocks at interior mills, elevators, and warehouses; commercial stocks reported by Grain Division, A.M.S., at terminals; and those owned by Commodity Credit Corporation which are in transit to ports, in bins and other storages under C.C.C. control.
[4] Unallocated--to avoid disclosing individual operations.

[1] State averages calculated by dividing the reported total daily milk production on the 1st of each month by the number of milk cows in milk or dry on farms reporting. Figures for New England States and New Jersey are based on combined returns from crop and special dairy reporters. Figures for other States, regions and United States are based on returns from crop reporters only. Regional figures include less important dairy States not shown separately. The United States average is based on about 20,000 herds. To reduce to quarts, divide by 2.15.

Milk Production on Farms in the United States, by Months, 1955, With Comparisons

[1] Out-of-State dairy cattle sold on the Brighton, Mass. cattle market and reshipped immediately to other States have not been included in Massachusetts inshipments or outshipments. Origin of dairy cattle received in Rhode Island via Brighton was credited back to Maine, New Hampshire, and Vermont in proportion to the origin of Brighton receipts. Numbers of dairy cattle reported by Maine, New Hampshire, and Vermont as shipped to Massachusetts were reduced by these amounts and numbers reported shipped to Rhode Island correspondingly increased.

[2] Data on outshipments are for the fiscal year ending June 30.

[3] Data for 1954 are estimates of dairy cattle based on a 9-month breakdown between dairy and beef animals. For years prior to 1954, New York inshipment and outshipment data included some beef breeding cattle which in 1954 accounted for 7 percent of the total.

ACREAGE AND PRODUCTION OF CROPS IN 1955

Livestock and Poultry Inventory Numbers-- January 1, 1956

Livestock and poultry on farms and ranches showed a net increase of 2 percent during 1955, but the total for January 1, 1956, was 7 percent below the peak of January 1, 1944. The aggregate increase during 1955 resulted from a substantial increase in hog numbers and a small increase in cattle numbers. Sheep, horses and mules, chickens, and turkeys were down from a year earlier.

Combining the species on the basis of their economic importance reveals that livestock numbers increased 2 percent, while poultry decreased 2 percent. Meat animals (cattle, hogs, and sheep) were up 2 percent, while workstock was down 8 percent. Milk cattle (milk cows, heifers, and calves) showed a decrease of 1 percent.

Cattle numbers increased slightly during 1955, reaching a new high of 97.5 million head. Beef cows set a new record high, but milk cows declined 1 percent to the second lowest inventory since 1930. Hog numbers were 9 percent above January 1, 1955. Inventories of all sheep declined 1 percent, while horses and mules declined 8 percent during 1955. Chicken inventories decreased 2 percent. Turkey breeder hens increased 7 percent. The increase in heavy breed types was 10 percent, but light breeds decreased 8 percent.

Prices were favorable in relation to feed costs early in 1955 for hogs, beef cattle, and commercial broilers. Prices for fed cattle declined steadily during the year. Prices for broilers and hogs dropped substantially during the last half of the year, becoming less favorable in relation to feed prices as increased supplies were marketed. Prices for eggs and turkeys averaged higher than a year earlier; milk prices showed little change. Price-feed ratios for all 3 products were more favorable than in 1954 as feed prices were substantially lower at the beginning of the 1955-56 feeding season than a year earlier.

Pig Crops

The 1955 pig crop totaled 95.3 million head, an increase of 10 percent from 1954. The spring pig crop at 57.3 million head was up 8 percent, and the fall crop at 37.9 million head was 12 percent larger than 1954. The num-

LIVESTOCK AND POULTRY

ber of sows farrowed in the 1955 spring season totaled 8.3 million head, 8 percent larger than a year earlier. The number of pigs per litter at 6.90 was the highest of record. The number of sows farrowed in the fall of 1955 totaled 5.6 million head, or 11 percent greater than a year earlier. The number of pigs saved per litter, at 6.81, was also the highest on record for the fall season.

Lambs Saved

The lamb crop for 1955 totaled 20.2 million head, 1 percent less than the 20.3 million head raised in 1954. The percentage lamb crop (number of lambs saved per 100 ewes one year old and over on January 1) was 95, the same as in 1954--tieing for the largest lamb crop percentage on record.

Calf Crop

The number of calves born in 1955 reached a new record high of 43.0 million calves, an increase of 1 percent from 1954. Calves born represented 88 percent of the 49 million cows on hand January 1, 1956, compared with an average of 84 percent.

Livestock Slaughter

Commercial meat production in 1955 totaled 25.5 million pounds. Comparing 1955 with 1954, beef production was up 5 percent; pork production was up 12 percent; and mutton and lamb output was up 3 percent. Production of veal was down 4 percent. Lard production was up 16 percent from a year earlier. Beef accounted for 52 percent of the total commercial meat production in 1955, compared with 53 percent in 1954. Pork comprised 39 percent, compared with 37 a year earlier. Veal made up 6 percent in 1955, compared with 7 percent in 1954. Mutton and lamb accounted for 3 percent of total red meat in both 1955 and 1954.

Poultry and Eggs

Egg production in 1955 totaled 59,485 million eggs, 1 percent above 1954, but the 462 million farm chickens raised in 1955 represented a 14 percent drop from 1954. Commercial broiler production, however, reached a new record in 1955 at 1,078 million birds, 3 percent more than a year earlier. The number of turkeys raised was down 3 percent from 1954. The decrease was entirely in light breed turkeys which were 12 percent below the light breed types raised in 1954.

[1] Excludes farm slaughter. [2] Excludes lard and rendered pork fat. [3] Chicken and turkey meat--ready to cook basis, excludes slaughter on farms for home use and nonfarm production. Estimates of monthly poultry meat production based on available indications of marketings developed from information on inventories, numbers raised, intentions to raise and market poultry as well as data on chick placements and current monthly marketings. [4] Includes rendered pork fat.

[1] Ratio of the Index of Prices Received by Farmers to the Index of Prices Paid, Interest, Taxes, and Wage Rates. This Parity Ratio will not necessarily be identical to a weighted average percent of parity for all farm products largely because, pursuant to law, parity prices for some products are on the modernized formula, others are on the old formula, and some are on a transitional basis.

Index Numbers of Prices Received by Farmers for All Farm Products, United States, by Months, 1910–55

[1] Ratio of the Index of Prices Received by Farmers to the Index of Prices Paid, Interest, Taxes, and Farm Wage Rates. This Parity Ratio will not necessarily be identical to a weighted average percent of parity for all farm products largely because, pursuant to law, parity prices for some products are on the modernized formula, others are on the old formula, and some are on a transitional basis.

Average Prices Received by Farmers, United States 1945–55

[1] Season average refers to the crop of the designated year and was computed by weighting State season average prices by estimated production.
[2] Includes an allowance for unredeemed loan and purchase agreement deliveries valued at the average loan rate by States.
[3] Does not include payment of 30 cents per bushel for wheat delivered under the Government purchase program.
[4] Preliminary.

[1] Season average was computed by weighting U. S. monthly prices by monthly marketings for all hay 1945-49 and by monthly marketings of respective hays 1950-55.

[2] Season average refers to the crop of the designated year. For citrus crops, refers to crop which bloomed in year designated, marketings of which extended into following calendar year.

[3] Preliminary.

[4] Monthly prices prior to July 1954 include some processing. Season average prices refer to apples for all methods of sale and are computed by weighting State season average prices by estimated production.

[5] Equivalent packing-house door returns for all methods of sale. Season averages were computed by weighing State season average returns by estimated sales.

[1] Equivalent packing-house door returns for all methods of sale. Season averages were computed by weighting State season average returns by estimated sales.

[2] Season average refers to the crop of the designated year. For citrus corps refers to crop which bloomed in year designated, marketings of which extended into following calendar year.

[3] Preliminary.

[4] Prior to April 1955 monthly and season average prices were computed by weighting State prices by estimated production; beginning April 1955, monthly and season average prices were computed by weighting State prices by estimated sales.

[5] Includes an allowance for unredeemed loan wool.

[6] Average local market price for wool sold; does not include incentive payment to bring season average return for 1955 to 62 cents per pound.

[7] Does not include an allowance for wartime subsidy payments from July 1945 through June 1946. Season average was computed by weighting State season average prices by estimated production.
